## TOPICS A New Automobile Loan Product Using a Tie-up with GMS

■ USS established an equity and business alliance with Global Mobility Service, which is a provider of a diverse lineup of fintech services.

- The launch of this new automobile loan will enable people who previously were unable to obtain a loan for a variety of reasons to finally own a vehicle.
- This loan is expected to raise activity in the automobile auction market by increasing the number of people who are able to buy a used vehicle.

A person who is unable to use a conventional loan can now purchase a car

MCCS is a proprietary on-board loT device provided by GMS that can communicate with various mobility and data worldwide (GMS has acquired the patent for this technology).

## Automobile Market and USS Revenue

- The supply of used cars for automobile auctions is significantly affected by the number of cars traded in when purchasing a new car. Therefore, this supply changes with (1) the number of new car registrations and (2) the number of used car registrations.
- Total demand comprises domestic demand (2) and overseas demand (3). In recent years, total demand has been driven mainly by overseas demand.
■ In addition to the above, share of the used car auction market and contract ratio have an important bearing on USS auto auction profits.

## New/Used Car Registrations and Auto Auction Market

- The auction market continued to expand till 2000 as the share of used vehicles sold through the auction market increased as a share of the total used vehicle market.
- Starting in the mid-2000s, older vehicles and vehicles with high mileage which would normally have been scrapped started flowing into auto auction sites and steadily drove up the number of vehicles consigned.
- After the financial crisis of late 2008 the auto auction market was largely correlated to new car registrations (supply) and exports (demand).

New/Used car registrations, used car exports, vehicles consigned and vehicles contracted (CY)
